

# CLIMATE-READY TREES FOR FIVE CLIMATE ZONES OF NEW MEXICO

## How to Use These Lists

The following tree species selection lists should only be used as a starting point when determining the right tree for the right place. They should always be used in conjunction with the Master spreadsheet, planting site characteristics, local expert knowledge, and applicable local or municipal tree ordinances.

Finally, it is important that trees be planted correctly and all trees need additional irrigation during an establishment period, usually the first three years after planting. Please consult local resources for proper planting techniques and specific watering guidance.

All USDA Hardiness Zones listed below are the projected zone at end of century.
